

Modeling Assignment

The assignment was to model dialogue between two agents, Alice and Bob, with the subject matter of the availability of 50-inch televisions in a warehouse stock list, as well as the number of HDMI slots the televisions have.

Agents

1. Alice is the agent that makes queries.
2. Bob is the agent that replies with information responsive to Alice's queries.

Step 1

Alice queries Bob about the available stock of 50-inch televisions:

```
(ask-one
:sender      Alice
:receiver    Bob
:language    KIF
:ontology    warehouse-inventory
:content     (available-stock (item television) (size 50 inch) ?quantity)
:reply-with  msg-001
)
```

Step 2

Bob replies to Alice with the current stock level.

```
(tell
:sender      Bob
:receiver    Alice
:language    KIF
:ontology    warehouse-inventory
:content     (available-stock (item television) (size 50 inch) 120)
:in-reply-to msg-001
)
```

Step 3

Alice queries again for how many HDMI slots the televisions have.

```
(ask-one
:sender      Alice
:receiver    Bob
:language    KIF
:ontology    warehouse-inventory
:content     (has-feature (item television) (size 50 inch) (hdmi-slots ?count))
:reply-with  msg-002
)
```

Step 4

Bob replies with the HDMI slot count.

```
(tell
:sender      Bob
:receiver    Alice
:language    KIF
:ontology    warehouse-inventory
:content     (has-feature (item television) (size 50 inch) (hdmi-slots 3))
:in-reply-to msg-002
)
```
